

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A displacement ~~Displacement~~ device for a repositionable load that is submitted to the thrust of a force, ~~such as its own weight, characterized in what it includes~~ comprising at least one support arm being linked at one extremity with an elastic mounting device whose opposite extremity is interdependent with a removable repositionable fastening device on the load, aforesaid support arm being driven into displacement by a driving device, said device being such that when the force exerts a thrust on the load, at least one elastic mounting device undergoes a compression and at least one elastic mounting device undergoes an extension, while temporarily steadying the interdependent load with aforesaid displacement device.
2. (Currently Amended) A steadying ~~Steadying~~ device on a bracket of a panel perpendicular to ~~the a thrust of the a fluid, in an appreciably vertical position, characterized in what it includes~~ comprising at least two support arms, each having one extremity linked to the panel [[P]], and the opposite extremity linked to one extremity of an elastic mounting device whose opposite extremity is interdependent with a removable repositionable fastening device on the support, the elastic ~~devices~~ device being in a plan different from a plan of the panel [[P]] in such a way that when the fluid exerts a thrust on the panel, at least one elastic mounting device undergoes a compression, and at least one elastic mounting device undergoes an extension, while steadying the panel in its initial position.

3. (Currently Amended) The displacement device of claim 1, Device according to claim 1 or 2, characterized in that it includes further comprising at least three elastic devices.
4. (Currently Amended) The displacement device of claim 3, Device according to claim 1 or 2, characterized in that wherein the three elastic devices are comprise springs.
5. (Currently Amended) The displacement device of claim 3, Device according to claim 1 or 2, characterized in that wherein the three elastic devices are comprise a piston-cylinder system.
6. (Currently Amended) The displacement device of claim 1, Device according to any of the previous claims, characterized in that wherein the removable repositionable fastening device are comprises magnets.
7. (Currently Amended) The displacement device of claim 1, Device according to any of claims 1 or 6, characterized in that wherein the removable repositionable fastening device are comprises a suction cup.
8. (Currently Amended) The steadying device of claim 2, Device according to any of claims 2 or 7, characterized in that wherein the support arms are comprise L- supports having an appreciably triangular shape with one side interdependent with the panel.
9. (Currently Amended) The steadying device of claim 2, Device according to any of claims 2 to 8, characterized in that wherein the support arms are part of a support plate constituted by said arms coupled through their panel interdependent sides.
10. (Currently Amended) The steadying device of claim 2, Device according to any of claims 2 to 9, characterized in that wherein the panel comprises is chosen among a double-sided panel[[.]] or a cylindrical panel.

11. (Currently Amended) The steadying device of claim 2, Device according to any of claims 2 to 10, characterized in that wherein the panel in cross-section view forms a trapeze whose height is the device symmetry axis, whose large basis at both its extremities is interdependent with to elastic devices and whose sides are curved and concave.

12. (Currently Amended) The steadying device of claim 2, Device according to any of claims 2 to 11, characterized in that wherein the support is fixed fix.

13. (Currently Amended) The steadying device of claim 2, Device according to any of claims 2 to 12, characterized in that wherein the support is mobile, is preferably the roof of a car.

14. (Currently Amended) An assembly Assembly to vertically displace a repositionable load submitted to its own weight comprising including at least two devices placed side-by-side according to claim 1, each device comprising at least one support arm being linked at one extremity with an elastic mounting device whose opposite extremity is interdependent with a removable repositionable fastening device on the load, aforesaid support arm being driven into displacement by a driving device, said device being such that when the force exerts a trust on the load, at least one elastic mounting device undergoes a compression and at least one elastic mounting device undergoes an extension, while temporarily steadying the interdependent load with aforesaid displacement device.

15. (Currently Amended) An assembly Assembly to vertically displace a repositionable load submitted to its own weight including device according to claim 1 provided with, the assembly comprising:

at least one support arm being linked at one extremity with an elastic mounting device whose opposite extremity is interdependent with a removable repositionable fastening device on the load, aforesaid support arm being driven into displacement by a driving device, said device

being such that when the force exerts a trust on the load, at least one elastic mounting device undergoes a compression and at least one elastic mounting device undergoes an extension, while temporarily steadying the interdependent load with aforesaid displacement device; and
a plurality of elastic, ~~device~~— removable fastening device systems placed linearly.

16. (New) The steadying device of claim 2, further comprising at least three elastic devices.
17. (New) The steadying device of claim 16, wherein the three elastic devices comprise springs.
18. (New) The steadying device of claim 16, wherein the three elastic devices comprise a piston-cylinder system.
19. (New) The steadying device of claim 2, wherein the removable repositionable fastening device comprises magnets.
20. (New) The steadying device of claim 2, wherein the removable repositionable fastening device comprises a suction cup.
